NGA: Ranked prioritised order to implement PMC

Order at which to implement PMC in the country based on cost-effectiveness of the PMC delivery strategy.

NGA: Incremental cost-effectiveness ratios of implementing PMC co-delivery with EPI only vs No PMC in each admin-1 unit.

Incremental cost-effectiveness ratios of implementing PMC co-delivery with EPI only vs No PMC in each admin-1 unit. All costs used to calculate these exclude national-level start up costs.

NGA: Ranked prioritisation of options (page 1)

The first row indicates the single region and delivery model where PMC would be most cost-effective, meaning it would gain the most health (in disability-adjusted life-years) for the resources invested (public health service + donor costs of PMC and malaria treatment). The second row indicates the next-most cost-effective option to consider implementing alongside the first option, if additional implementation resources remain.

Country	Region (admin-1)	PMC delivery strategy (vs. comparator)	Additional clinical malaria cases averted	Additional hospitalisations averted	Additional deaths averted	Additional DALYs averted

NGA: Ranked prioritisation of options (page 10)

The first row indicates the single region and delivery model where PMC would be most cost-effective, meaning it would gain the most health (in disability-adjusted life-years) for the resources invested (public health service + donor costs of PMC and malaria treatment). The second row indicates the next-most cost-effective option to consider implementing alongside the first option, if additional implementation resources remain.

Country	Region (admin-1)	PMC delivery strategy (vs. comparator)	Expected PMC doses delivered (age 1-2yr)	Expected PMC doses delivered (age 2-2.5yr)	Data source for cost modelling	ICER based on regional costs only (no national costs)

NGA	Zamfara	4994682	No PMC	46.77
NGA	Zamfara	4994682	PMC co–delivery with EPI only	46.77

NGA: Clinical malaria incidence

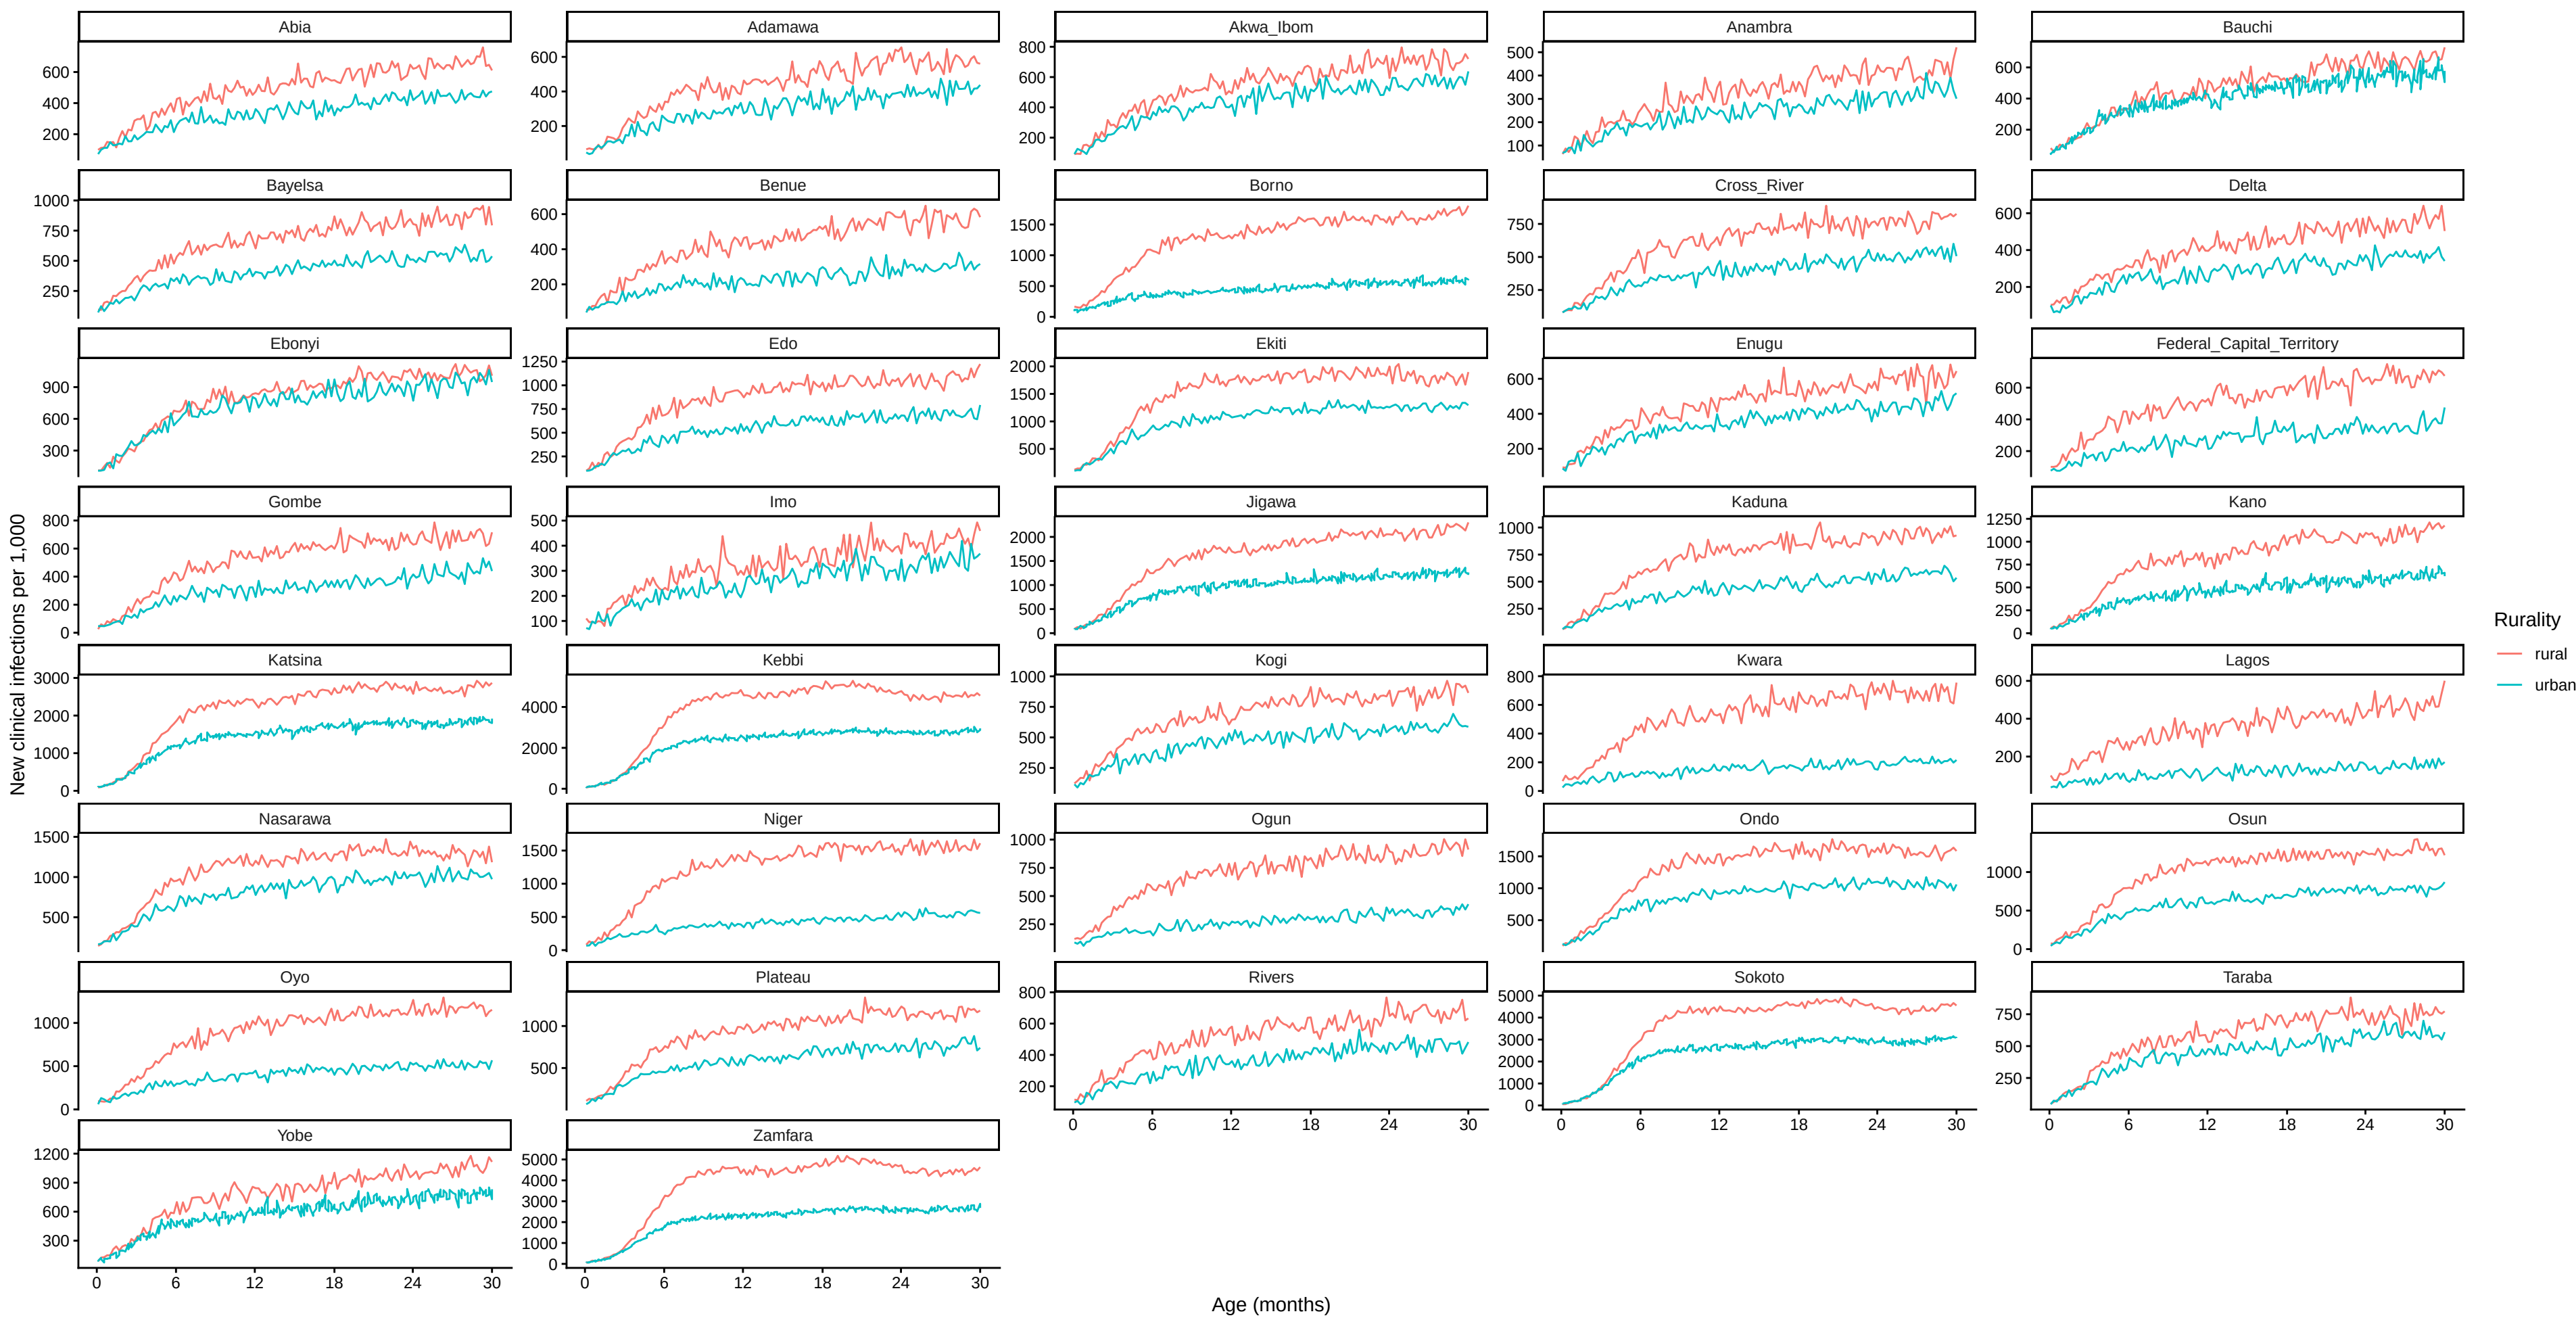

Age-specific clinical malaria cases per 1,000 children (0–30 months, with and without PMC).

PMC is assumed to be co-delivered with EPI and have a 90% uptake relative to the coverage of the co-delivered intervention.

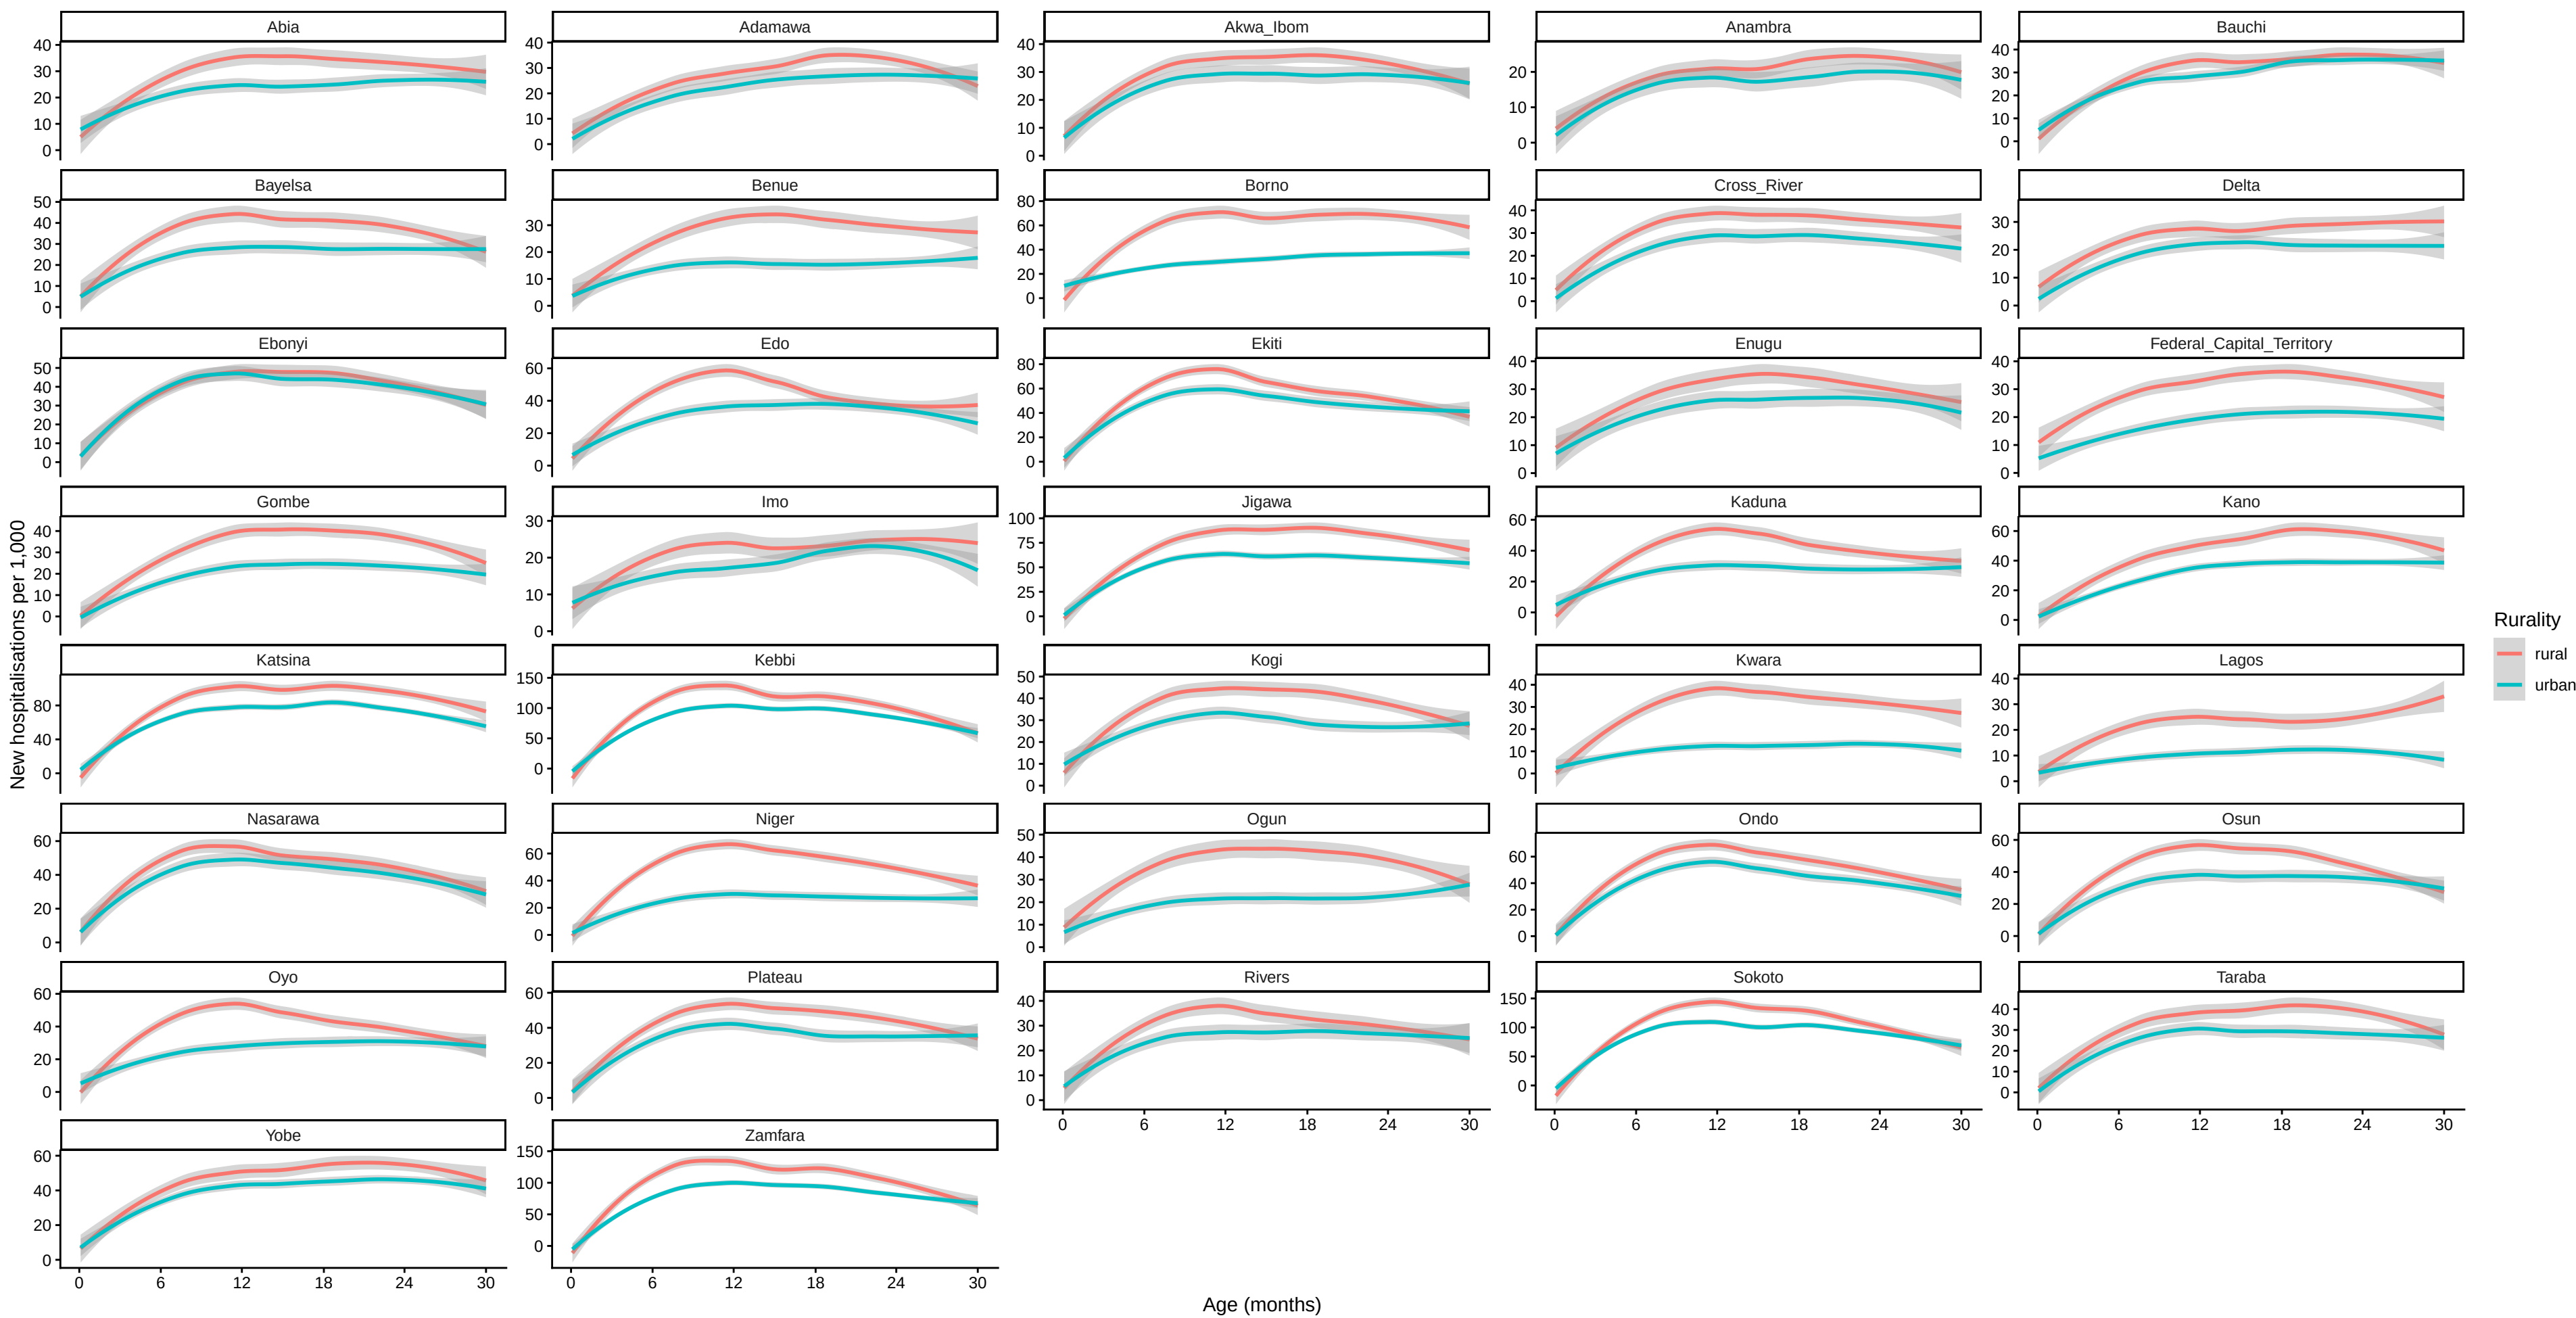

NGA: Clinical malaria incidence (rural and urban)

Age-specific clinical malaria cases per 1,000 children (0–30 months, no PMC), stratified by rural and urban residence.

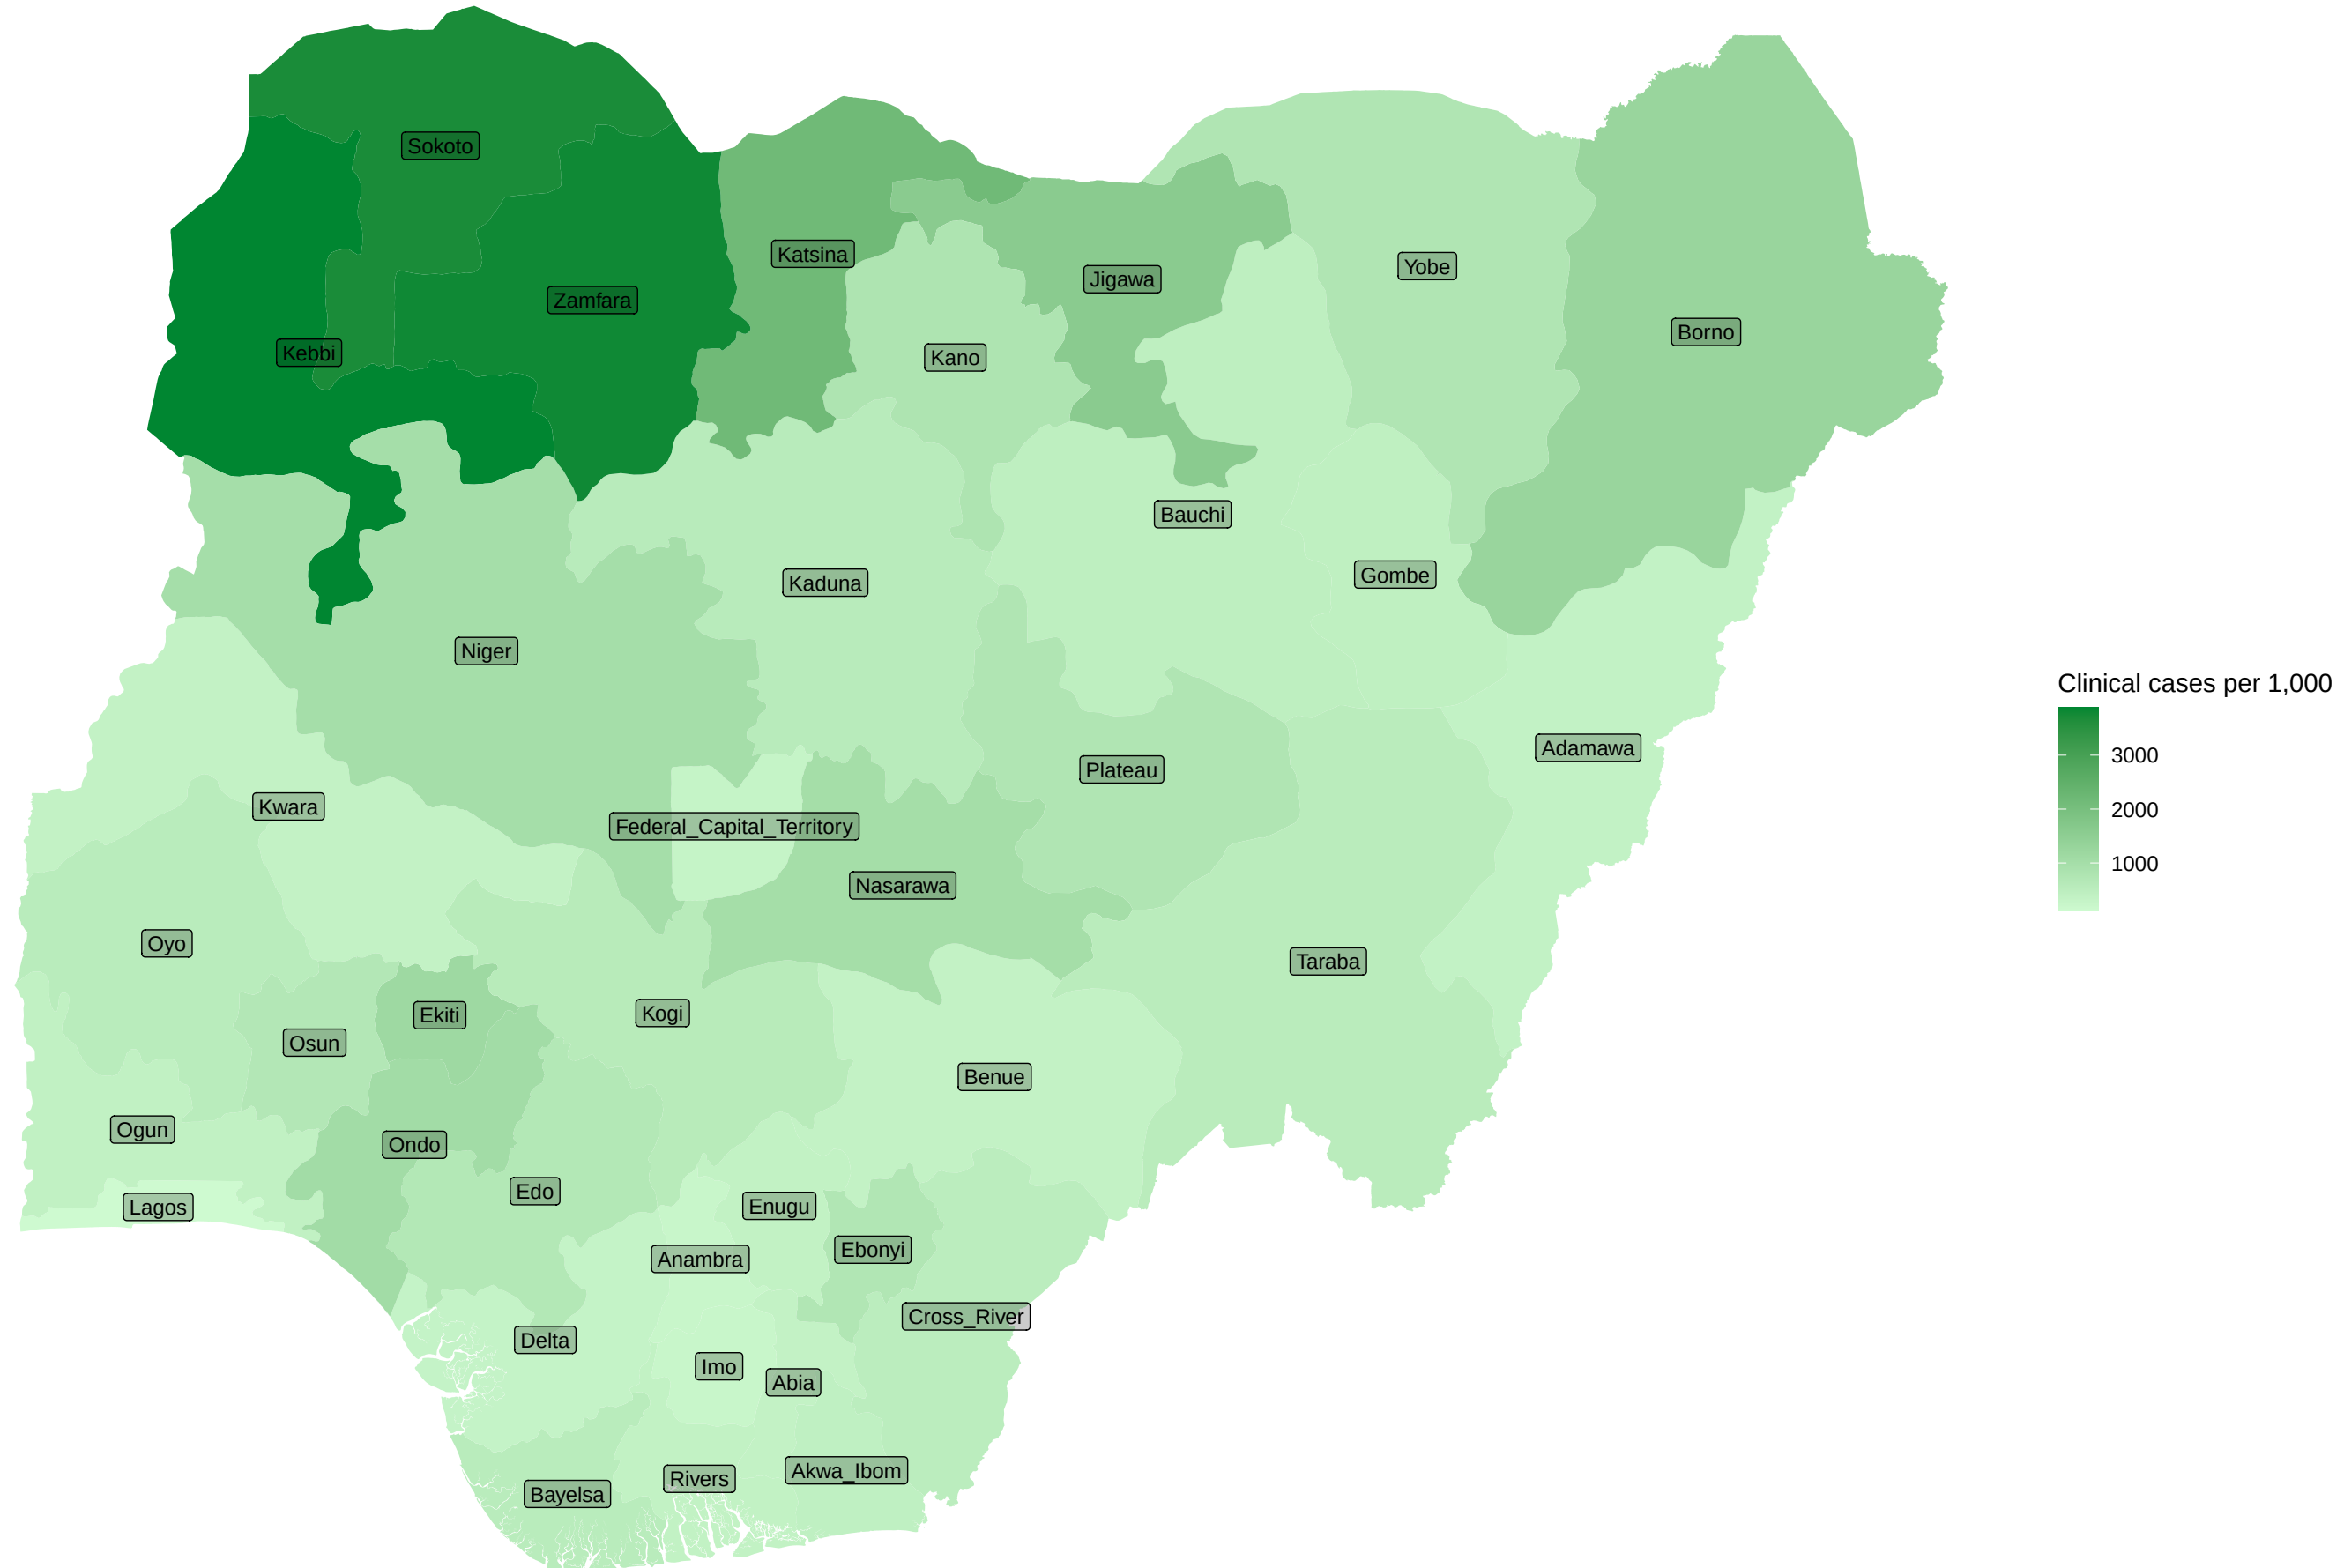

NGA: Malaria hospitalisations

Age-specific new malaria hospitalisations per 1,000 children (0–30 months, no PMC), stratified by rural and urban residence.
Raw model outputs have been smoothed to reduce stochastic variation.

NGA: Spatial distribution of clinical malaria without PMC

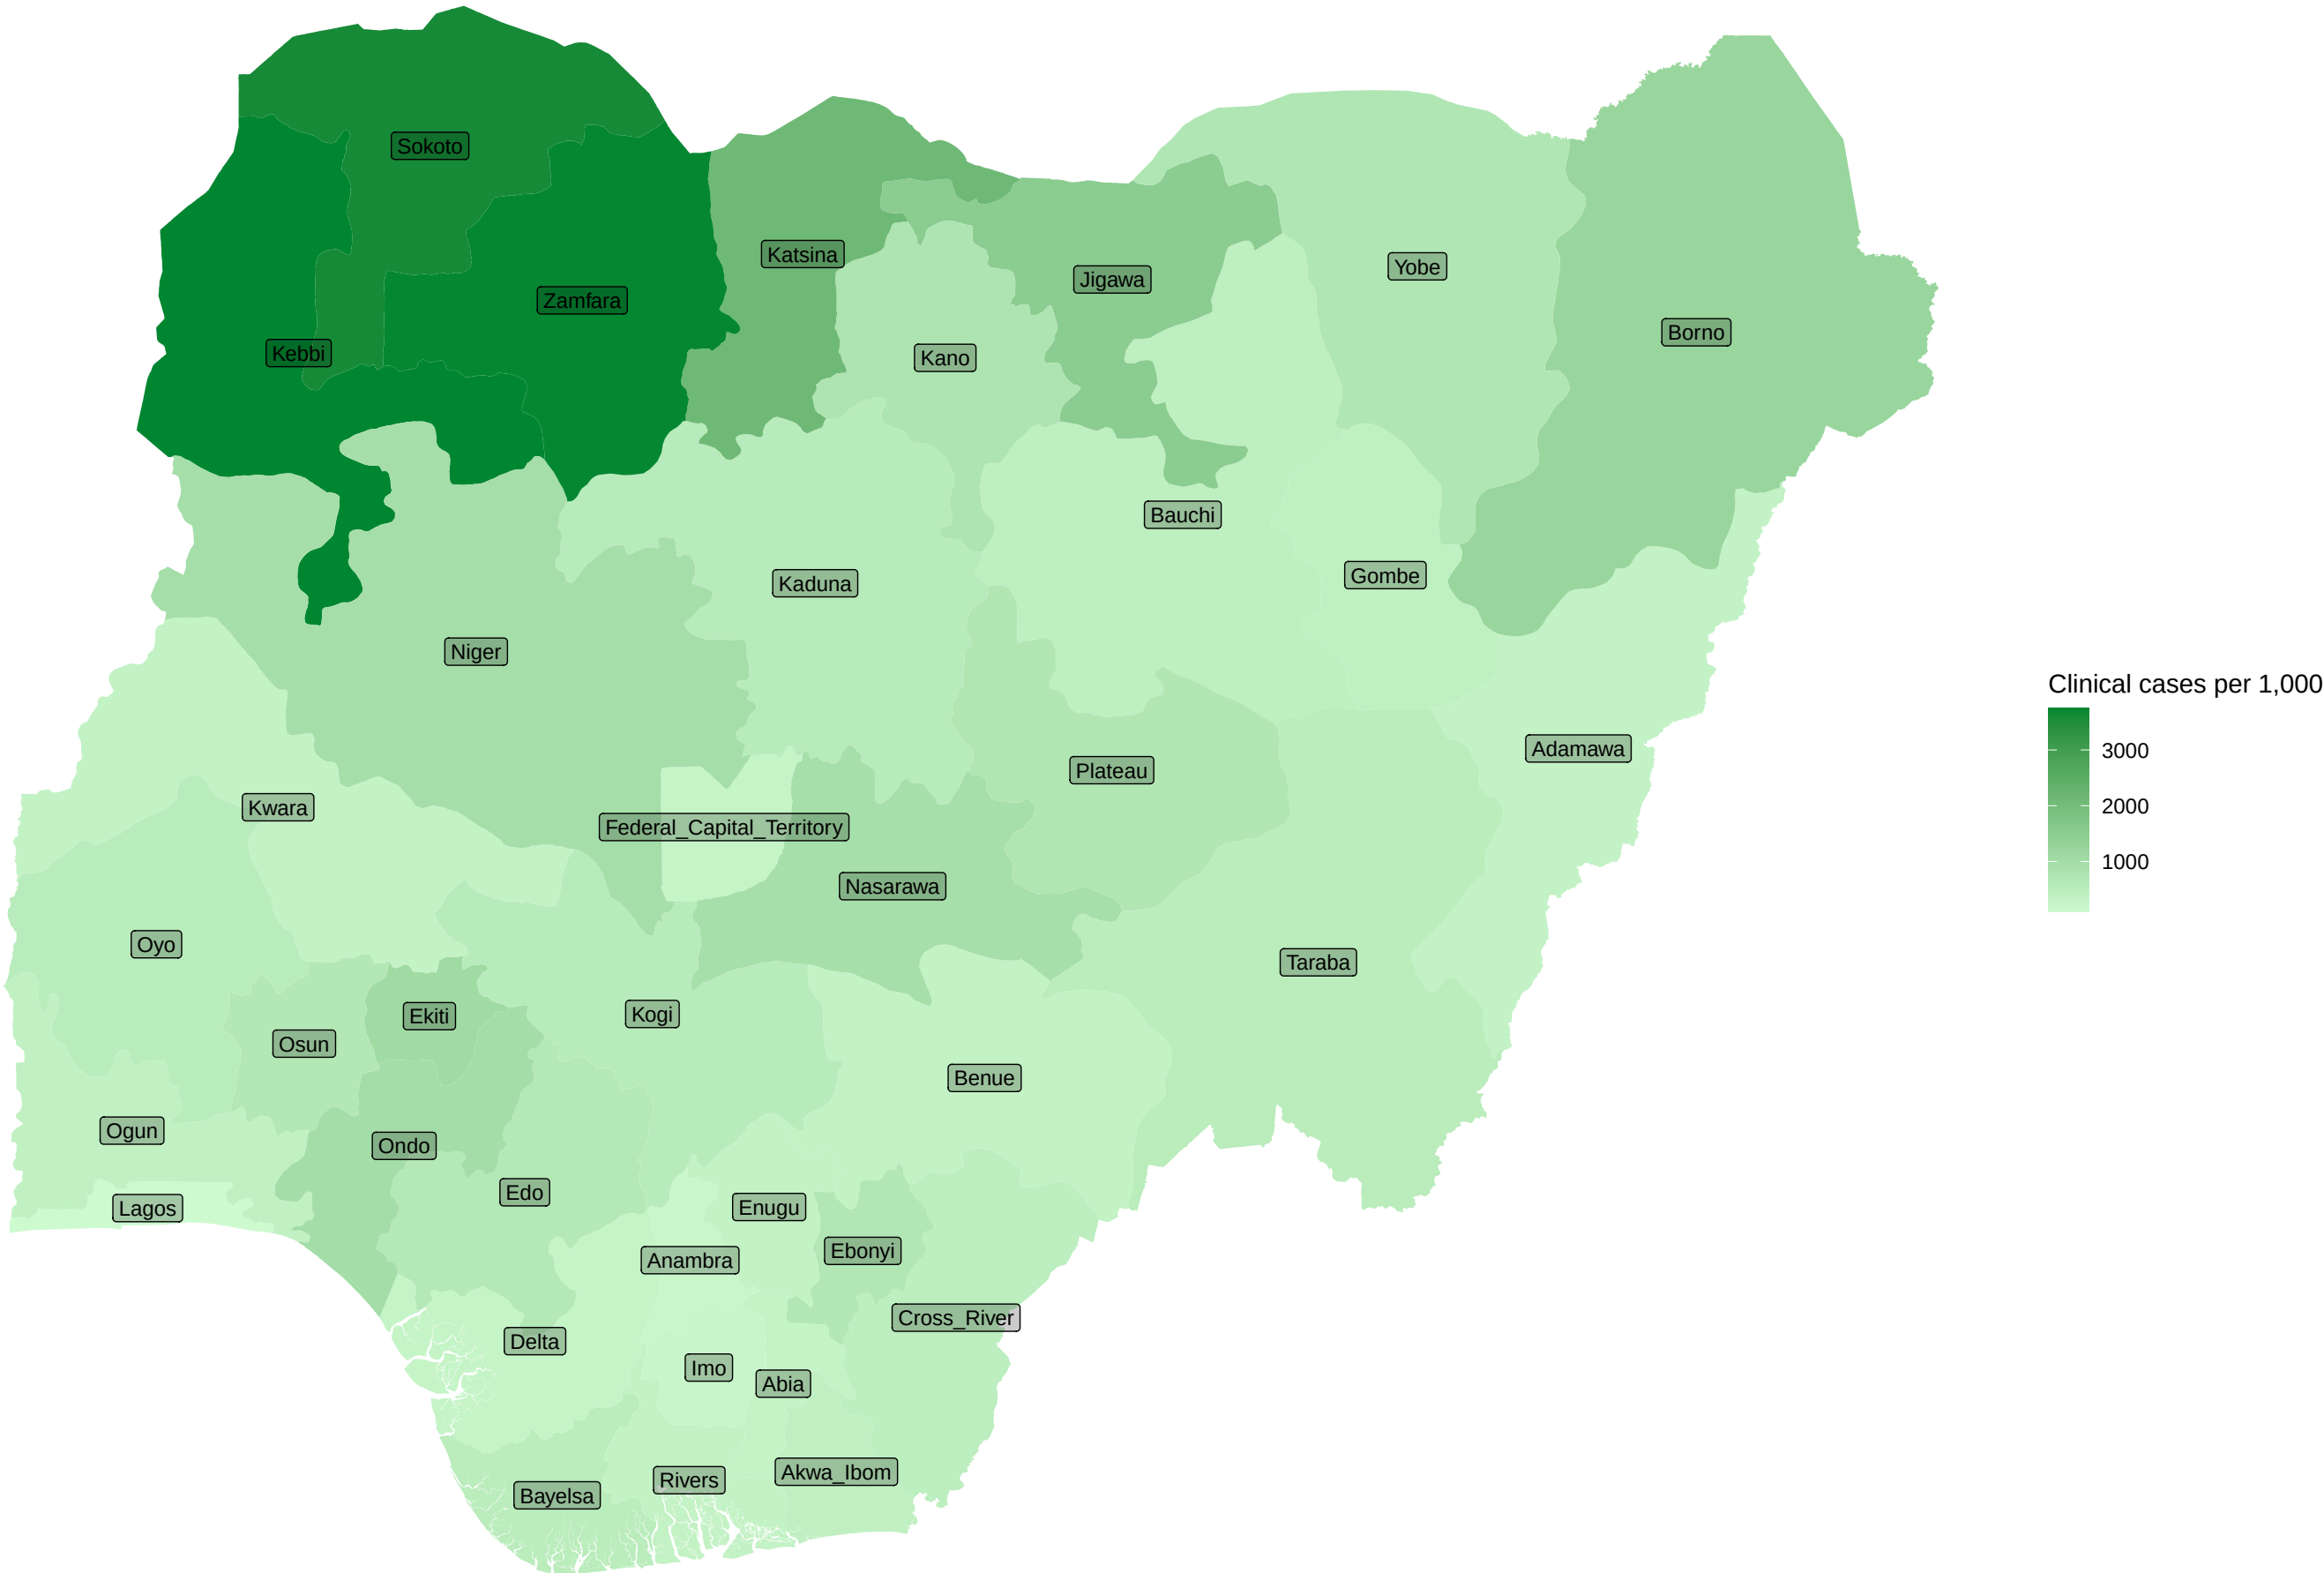

Admin-1 clinical malaria incidence per 1,000 children aged (0–30 months, no PMC).

NGA: Spatial distribution of clinical malaria with PMC

Admin-1 clinical malaria incidence per 1,000 children aged (0–30 months, with PMC).

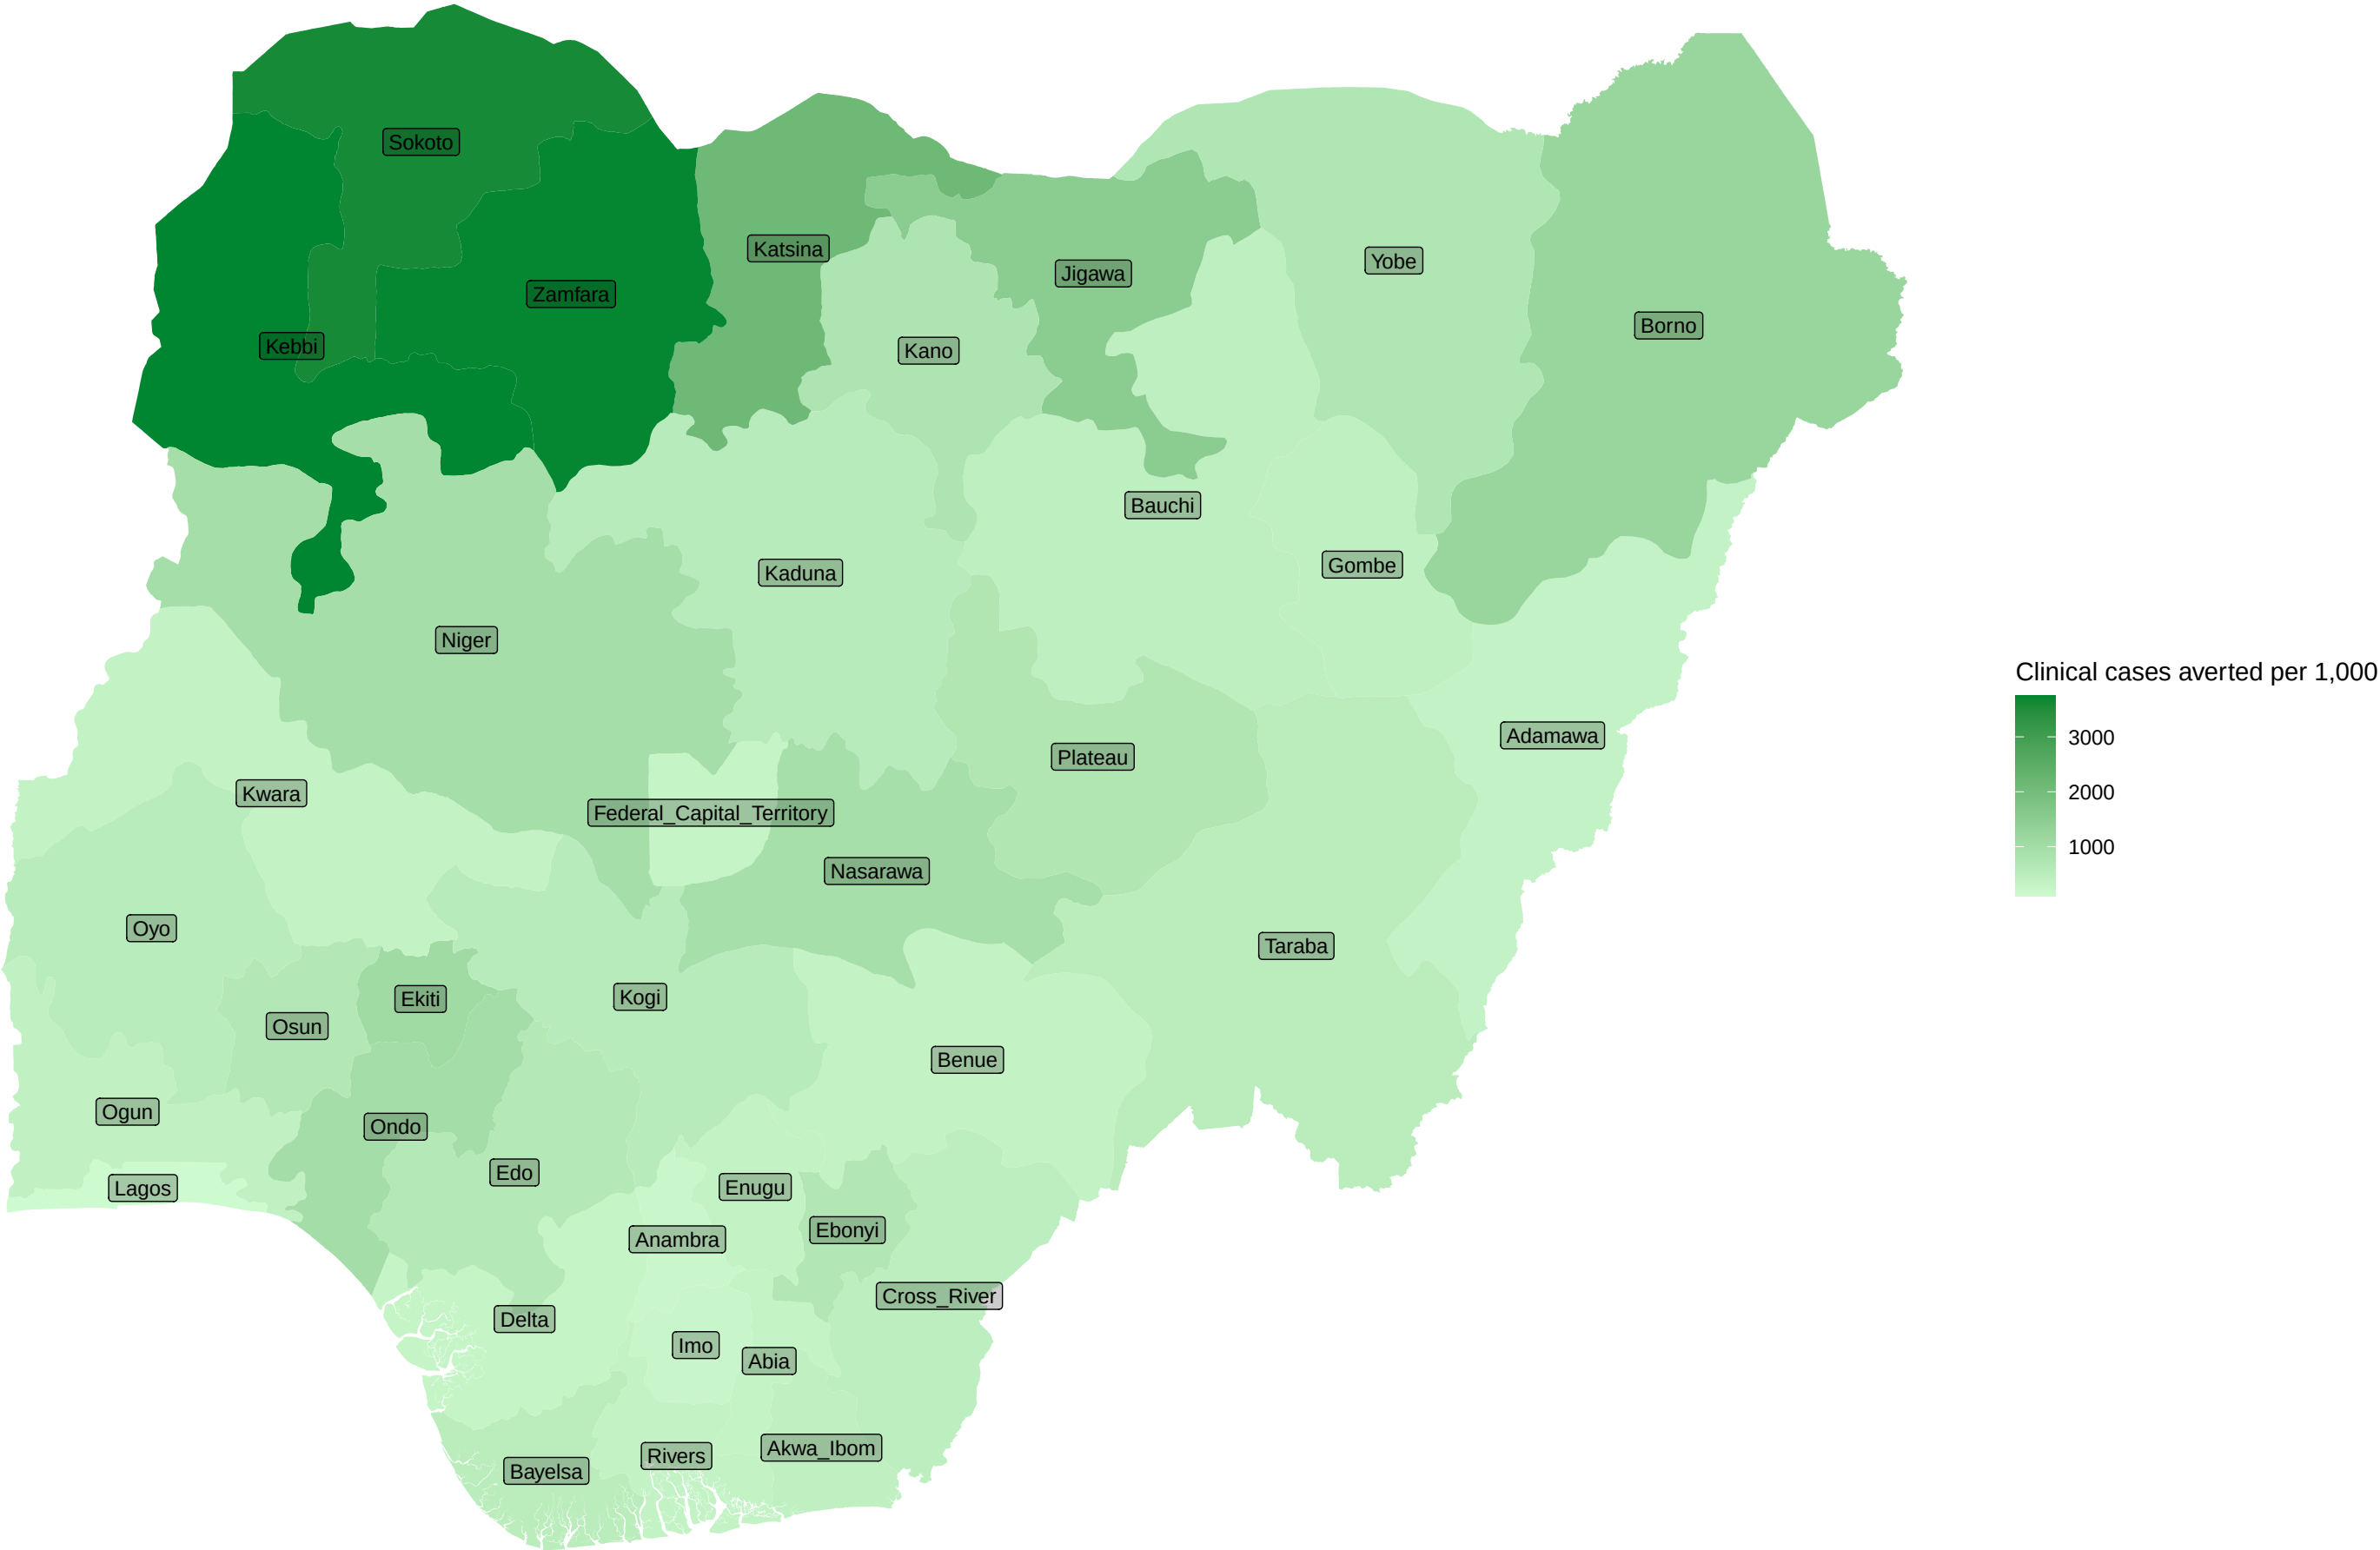

PMC is assumed to be co-delivered with EPI and have a 90% uptake relative to the coverage of the co-delivered intervention.

NGA: Spatial distribution of averted clinical malaria with PMC

Admin-1 averted clinical malaria incidence per 1,000 children aged (0–30 months, averted with PMC).

PMC is assumed to be co-delivered with EPI and have a 90% uptake relative to the coverage of the co-delivered intervention.

NGA: Clinical malaria burden (page 1)

Annual clinical malaria burden per 1,000 children aged 0–2.5 years, with and without PMC.

PMC is assumed to be co–delivered with EPI and have a 90% uptake relative to the coverage of the co–delivered intervention.

Admin–1	Clinical cases per 1,000, no PMC (0–2.5y)	Clinical cases per 1,000, with PMC (0–2.5y)	Clinical cases averted per 1,000 (0–2.5y)
